

Labour Force Statistics ♦ January 2005

HIGHLIGHTS

IMPORTANT NOTICE: *Labour Force Survey (LFS) estimates have undergone extensive revisions to reflect 2001 Census population counts. Historical comparisons now use the revised data. For more information about the data revisions and their effect, please see the note on the following page. All labour force statistics in this Highlights article are seasonally adjusted, unless otherwise indicated*

- **Total employment in BC grew slightly in January from December (0.1 per cent).** The 2,200 net increase reflected full-time employment growth (16,800) which more than offset part-time losses (-14,700). The ratio of full-time to part-time workers has not been this high since October 1996.
- **Labour force growth in January (up 8,700) exceeded population growth.** As a result, the labour force participation rate increased slightly to 65.4 per cent from 65.3 per cent.
- **The unemployment rate increased to 6.5 per cent in January from 6.2 per cent in December, with 6,500 more people looking for work.** However, there were 19,900 fewer people unemployed in January 2005 than in January 2004.
- **The youth unemployment rate increased to 12.4 per cent in January, up from 11.2 per cent in December.** For those 25 years and older, the rate increased slightly to 5.4 per cent from 5.3 per cent.
- **The construction industry continued its strong pace of growth.** It grew by 6.0 per cent and added 9,400 jobs. This resulted in a record number of workers (166,200) in the industry.
- **Canada's unemployment rate remained unchanged at 7.0 per cent in January and there was no net employment growth at the national level.** BC, Alberta, Saskatchewan, Quebec, and Nova Scotia had employment gains which were completely offset by employment losses in most of the other provinces.

Selected Statistics	Jan. 2005	Dec. 2004	Jan. 2004
BC Unemployment Rate	6.5%	6.2%	7.4%
Canada Unemployment Rate	7.0%	7.0%	7.3%
BC Employment - Change from prev. mo.	0.1%	0.6%	-
BC Labour Force - Change from prev. mo.	0.4%	0.3%	-
BC Labour Force Participation Rate	65.4%	65.3%	66.0%

Labour Force Statistics is a joint compilation and review by BC STATS of the Ministry of Management Services and the Planning and Data Management Branch of the Ministry of Advanced Education, reflecting the results of the monthly Labour Force Survey conducted by Statistics Canada. For more information, call BC STATS (250) 387-0327 or the Planning and Data Management Branch (250) 387-3620.

Changes to Labour Force Survey Historical Data

Improvements in 2005 to the Labour Force Survey

Labour Force Survey (LFS) estimates have undergone extensive revisions by Statistics Canada.

- Estimates have been adjusted to reflect 2001 Census population counts; they were previously based on the 1996 Census estimates.
- Industry estimates have been reclassified from the 1997 to the 2002 North American Industry Classification System (NAICS).
- Occupation estimates have been classified from the 1991 Standard Occupation Classification (SOC) to the National Occupational Classification: Statistics 2001 (NOC-S).
- Geography boundaries have changed from the 1996 Standard Geographical Classification (SGC) to the 2001 SGC, which mainly affects boundaries of census metropolitan areas.

As a result of these changes, LFS estimates have been revised back to January 1976. Historical comparisons of estimates produced by the LFS are now made with the revised historical data. Note that the changes to the LFS do not involve modifications to the questionnaire or the content of the survey.

The Statistics Canada article *Improvements in 2005 to the LFS* (71F0031XIE2005002, free) provides an overview of the effect of the changes on the LFS estimates. It can be found at: <http://www.statcan.ca/cgi-bin/downpub/listpub.cgi?catno=71F0031XIE2005002>

Changes in a BC Context

The following tables compare the revised and old data for the BC employment levels and the BC unemployment rate. The new estimates of employment and unemployment are slightly lower overall due to slightly lower population estimates. However there is little difference in the trends of the series. More variation between revised and old series can be expected in less aggregated variables.

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Anne Kittredge at (250)387-0374 or Anne.Kittredge@gems6.gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate (employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.

Labour Force Statistics ♦ February 2005

HIGHLIGHTS

All labour force statistics in this Highlights article are seasonally adjusted, unless otherwise indicated

- **In February, BC had a net gain of 8,100 jobs over January.** The net increase reflected strong growth in part-time employment (14,500), which offset full-time losses (-6,200).
- **Among women, employment increased by 8,200 while there was little change in the level of employment among men.** However, compared with 12 months ago, employment growth has been stronger for men (4.4%) compared to women (2.4%).
- **Labour force growth in February (up 21,200) exceeded population growth.** As a result, the labour force participation rate increased slightly to 66.0 per cent from 65.4 per cent.
- **As there were 12,900 more people looking for work in February, the unemployment rate increased by half of a percentage point to 7.0 per cent.**
- **With increases in labour force participation among those aged 15-24 years, the youth unemployment rate increased to 12.5 per cent in February,** up slightly from 12.4 per cent in January.
- **The unemployment rate for those 25 years and older increased by half a percentage point to 5.9 per cent over January** due mainly to employment losses.
- **Job growth in the construction industry remained steady.** It grew by 1.6 per cent and added 2,700 jobs. Over the year, employment in this industry grew by 42,500.
- **Canada's unemployment rate remained unchanged at 7.0 per cent in February for the third consecutive month.** Most provinces, with the exception of Quebec, Nova Scotia and Newfoundland, experienced job growth over January, led by Ontario (19,100) and BC (8,100).

Selected Statistics	Feb. 2005	Jan. 2005	Feb. 2004
BC Unemployment Rate	7.0%	6.5%	7.8%
Canada Unemployment Rate	7.0%	7.0%	7.3%
BC Employment - Change from prev. mo.	0.4%	0.1%	-
BC Labour Force - Change from prev. mo.	0.9%	0.4%	-
BC Labour Force Participation Rate	66.0%	65.4%	65.4%

Labour Force Statistics is a joint compilation and review by BC STATS of the Ministry of Management Services and the Planning and Data Management Branch of the Ministry of Advanced Education, reflecting the results of the monthly Labour Force Survey conducted by Statistics Canada. For more information, call BC STATS (250) 387-0327 or the Planning and Data Management Branch (250) 387-3620.

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Anne Kittredge at (250)387-0374 or Anne.Kittredge@gems6.gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate (employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.

Labour Force Statistics ♦ March 2005

HIGHLIGHTS

All labour force statistics in this Highlights article are seasonally adjusted, unless otherwise indicated

- In March, BC had a small net gain of 1,200 jobs over February. The increase in part-time positions (4,400) was offset by losses in full-time employment (-3,300).
- In March, the estimated number of people in the labour market decreased by 9,900 to 2,248,200. As a result, the labour force participation rate declined over the month from 66.0 per cent to 65.6 per cent.
- As there were fewer people looking for work in March, the unemployment rate declined by half a percentage point to 6.5 per cent.
- The youth unemployment rate was 12.1 percent, down slightly from 12.5 per cent in February. The unemployment rate for those 25 years and older declined from 5.9 per cent in February to 5.5 per cent in March.
- There was a net loss of 9,100 jobs in the Goods-producing sector in March. The largest net loss was experienced in manufacturing (-7,100).
- Among Service-producing industries, there was a net gain of 10,200 jobs. Employment growth was strongest in Retail and Wholesale Trade (5,200) and Finance and Related (6,700).
- Canada's unemployment rate declined slightly from 7.0 per cent to 6.9 per cent over the month.
- When comparing the number of employed with the size of the working age population, B.C.'s employment rate remained unchanged over the month at 61.3 per cent. Meanwhile, Alberta continued to have the highest rate of employment among the provinces at 70.2 per cent.

Selected Statistics	Mar. 2005	Feb. 2005	Mar. 2004
BC Unemployment Rate	6.5%	7.0%	7.7%
Canada Unemployment Rate	6.9%	7.0%	7.3%
BC Employment - Change from prev. mo.	0.1%	0.4%	-
BC Labour Force - Change from prev. mo.	-0.4%	0.9%	-
BC Labour Force Participation Rate	65.6%	66.0%	65.3%

Labour Force Statistics is a joint compilation and review by BC STATS of the Ministry of Management Services and the Planning and Data Management Branch of the Ministry of Advanced Education, reflecting the results of the monthly Labour Force Survey conducted by Statistics Canada. For more information, call BC STATS (250) 387-0327 or the Planning and Data Management Branch (250) 387-0713.

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Anne Kittredge at (250)387-0374 or Anne.Kittredge@gems6.gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate (employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.

Labour Force Statistics ♦ April 2005

HIGHLIGHTS

All labour force statistics in this Highlights article are seasonally adjusted, unless otherwise indicated

- In April, BC's unemployment rate fell by four percentage points to 6.1 percent. This was the lowest provincial rate since June 1981.
- Canada's unemployment rate declined slightly from 6.9 percent to 6.8 percent over the month.
- BC's youth unemployment rate was down from 12.1 percent in March to 11.4 percent in April. The unemployment rate for those 25 years and older declined from 5.5 percent in March to 5.1 percent last month.
- The number of unemployed declined by 10,400 workers due to a growth in employment opportunities.
- In April, the Province saw a gain of 13,300 jobs, which accounted for 45 percent of last month's total job growth across the country.
- The labour force participation rate remained unchanged over the month at 65.6 percent.
- There was a growth of 5,900 jobs in the Goods producing industries in April. The largest gain was experienced in construction (+4,800), which recorded an employment total of 173,000.
- Among Service producing industries, there was a net gain of 7,300 jobs. Employment growth was strongest in Accommodation, Food and Beverage (11,200).
- When comparing the number of employed with the size of the working age population, B.C.'s employment rate increased slightly over the month from 61.3 percent to 61.6 percent. This was the highest rate since January 1981.

Selected Statistics	Apr. 2005	Mar. 2005	Apr. 2004
BC Unemployment Rate	6.1%	6.5%	7.5%
Canada Unemployment Rate	6.8%	6.9%	7.2%
BC Employment - Change from prev. mo.	0.6%	0.1%	4.0%
BC Labour Force - Change from prev. mo.	0.1%	-0.4%	2.4%
BC Labour Force Participation Rate	65.6%	65.6%	65.1%

Labour Force Statistics is a joint compilation and review by BC STATS of the Ministry of Management Services and the Planning and Data Management Branch of the Ministry of Advanced Education, reflecting the results of the monthly Labour Force Survey conducted by Statistics Canada. For more information, call BC STATS (250) 387-0327 or the Planning and Data Management Branch (250) 387-0713.

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Anne Kittredge at (250)387-0374 or Anne.Kittredge@gems6.gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate (employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.

Labour Force Statistics ♦ May 2005

HIGHLIGHTS

All labour force statistics in this Highlights article are seasonally adjusted, unless otherwise indicated

- In May, BC's unemployment rate fell to 5.7 percent, the second lowest rate on record.
- Canada's unemployment rate remained unchanged over the month at 6.8 percent.
- BC's youth unemployment rate was down from 11.4 percent in April to 10.9 percent in May. This is its lowest level since August 1990.
- The unemployment rate for those 25 years and older declined from 5.1 percent in April to 4.7 percent in May.
- The number of unemployed declined by 7,300 workers due to a growth in employment opportunities.
- In May, the Province saw a net gain of 17,700 jobs, which is 4,400 more than last month's gain of 13,300 jobs.
- The labour force participation rate increased slightly from 65.6 percent in April to 65.7 percent in May.
- For May, there was a net decrease of 7,200 jobs in the Goods producing industries. The largest loss was experienced in construction (-7,000).
- Among Service producing industries, there was a gain of 24,900 jobs. Employment growth was strongest in Public Administration, Transport and Warehousing, and Trade.
- When comparing the number of employed with the size of the working age population, B.C.'s employment rate increased over the month from 61.6 percent to 62.0 percent. Meanwhile, Alberta continued to have the highest rate of employment among provinces at 70.2 percent.

Selected Statistics	May 2005	Apr. 2005	May 2004
BC Unemployment Rate	5.7%	6.1%	7.5%
Canada Unemployment Rate	6.8%	6.8%	7.1%
BC Employment - Change from prev. mo.	0.8%	0.6%	4.1%
BC Labour Force - Change from prev. mo.	0.5%	0.1%	2.1%
BC Labour Force Participation Rate	65.7%	65.6%	65.5%

Labour Force Statistics is a joint compilation and review by BC STATS of the Ministry of Management Services and the Planning and Data Management Branch of the Ministry of Advanced Education, reflecting the results of the monthly Labour Force Survey conducted by Statistics Canada. For more information, call BC STATS (250) 387-0327 or the Planning and Data Management Branch (250) 387-0713.

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Anne Kittredge at (250)387-0374 or Anne.Kittredge@gems6.gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate (employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.

Labour Force Statistics ♦ June 2005

HIGHLIGHTS

All labour force statistics in this Highlights article are seasonally adjusted, unless otherwise indicated

- **British Columbia's unemployment rate in June edged up 0.1 percentage points to 5.8%, after three consecutive declines since February.** It is, however, still the second lowest rate since 1981.
- **Canada's unemployment rate dropped 0.1 percentage points to 6.7 percent in June.**
- **BC's youth unemployment rate continues to decline, reaching a fifteen-year low at 10.8 percent in June.**
- **The unemployment rate for those 25 years and older rose slightly from 4.7 percent in May to 4.8 percent in June.**
- **The labour force participation rate decreased slightly from 65.7 percent in May to 65.5 percent in June.**
- **In June, the percentage of part-time workers rose to 21.4 percent.** This was offset by a decrease in the amount of full-time employment, which suffered a loss of 31,900 jobs.
- **Among Service producing industries, there was a loss of 3,300 jobs.** The largest loss was in the Retail and Wholesale Trade producing industries (6,700 jobs).
- **Within the Goods sector, there was a total loss of 2,400 jobs.** A large loss was felt in Manufacturing (3,200), while Construction lost 2,000 jobs.
- **When comparing the number of employed with the size of the working age population, B.C.'s employment rate decreased over the month from 62.0 percent to 61.7 percent.** Alberta continues to have the highest rate of employment among provinces at 69.9 percent.

Selected Statistics	June 2005	May 2005	June 2004
BC Unemployment Rate	5.8%	5.7%	7.3%
Canada Unemployment Rate	6.7%	6.8%	7.2%
BC Employment - Change from prev. mo.	-0.3%	0.8%	2.7%
BC Labour Force - Change from prev. mo.	-0.2%	0.5%	1.0%
BC Labour Force Participation Rate	65.5%	65.7%	66.0%

Labour Force Statistics is a joint compilation and review by BC STATS of the Ministry of Labour and Citizens' Services and the Planning and Data Management Branch of the Ministry of Advanced Education, reflecting the results of the monthly Labour Force Survey conducted by Statistics Canada. For more information, call BC STATS (250) 387-0327 or the Planning and Data Management Branch (250) 387-0713.

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Anne Kittredge at (250)387-0374 or Anne.Kittredge@gems6.gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate (employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.

Labour Force Statistics ♦ July 2005

HIGHLIGHTS

All labour force statistics are seasonally adjusted, unless otherwise indicated

Unemployment rate rises, as job growth stalls—but still low by historical standards

- British Columbia's unemployment rate jumped to 6.2% in July. The increase came after two months in which the rate was at a nearly 25-year low (5.7% in May and 5.8% in June). Despite the upturn, BC's unemployment rate remains low by historical standards. It has been below the national average in all but two months since July 2004—the first time since the mid-1990s that this has occurred.

Employment growth stalled again in July, with the number of people with jobs virtually unchanged from the previous month. At the same time, the labour force expanded (+0.4%), pushing the unemployment rate up as many of the new entrants were unable to find work.

- There were fewer jobs (-0.3%) in the service sector, which employs eight out of every ten workers in BC. Although job losses were widespread across most service industries, some service sector employers were taking on more workers. Employment in transportation & warehousing (+7.8%) and accommodation & food services (+3.4%) increased significantly, with smaller gains seen in the education (+1.8%) and health care (+1.8%) industries. However, the number of people working in retail & wholesale trade edged down 0.2%. Other service industries cut back their workforce, with the biggest decline occurring in professional, scientific & technical services industry, where em-

ployment fell (-4.6%) for the first time this year.

- The goods sector bounced back after two months of decline, with employment increasing 0.9% in July. Manufacturing activity began to ramp up (+4.4%), ending a five-month-long period of job losses. There were more people working in agriculture (+6.1%), but the number of construction jobs was unchanged from June.

Youth unemployment rate continues to fall

- The job market for students and young workers was the best it has been in years. The youth (15-24) unemployment rate continued to fall in July, dropping to 10.7%, nearly three points lower than in the same month of 2004. Since May, the youth unemployment rate has remained at levels not seen since 1990 (when it dropped briefly in August)—and not consistently

seen since the early 1980s. The unemployment rate for workers aged 25 and over was 5.3% in July. For the second month in a row, fewer men (-0.4%) had jobs. However, the number of employed women bounced back (+0.3%) after slipping in June.

- **Self-employment remained a significant source of new jobs in the province, with the number rising 4.7%, enough to offset a drop in the number of public (-1.1%) and private (-1.2%) sector employees.** Full-time employment increased 1.4% in July, but there were fewer people with part-time work (-5.4%).

Job gains in most regions

- **Most regions saw job gains in July, with employment increasing at rates ranging from +1.8% in Mainland/Southwest (3-month-moving average) to +16.8% in North Coast/Nechako (relative to the same month last year).** However, there were fewer people with jobs in Cariboo (-2.2%), which posted a second straight year-over-year decline. The labour force shrank in both Kootenay (-0.1%) and Cariboo (-3.3%), but expanded in other parts of the province.

- **For the third month in a row, unemployment rates were below ten percent (3-month-moving average) in every region of the province.** Residents of Kootenay (4.0%) and Northeast (4.9%) experienced jobless rates that were substantially lower than the provincial average. Thompson/Okanagan (5.2%) and Vancouver Island/Coast (5.3%) also recorded below-average unemployment rates. Jobless rates were higher in Mainland/Southwest (6.1%), North Coast/Nechako (6.5%) and Cariboo (7.5%).
- **Victoria's unemployment rate was just 3.9% (seasonally adjusted), about two-thirds the provincial level.** The jobless rate in Abbotsford (5.1%) and Vancouver (6.4%) was slightly higher.

The national picture

- **The Canadian unemployment rate inched up 0.1 percentage point to 6.8% in July.** As was the case in BC, employment growth stalled (0.0%) while the number of people who were either working or looking for work increased (+0.1%). Alberta continued to experience the lowest unemployment rate (3.6%) in the country. Manitoba (4.7%) and Saskatchewan (4.7%) also posted unemployment rates that were considerably lower than the national average. BC was the only other province where the jobless rate was significantly lower than the Canadian average.

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Anne Kittredge at (250)387-0374 or Anne.Kittredge@gems6.gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate (employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.

Labour Force Statistics ♦ August 2005

HIGHLIGHTS

All labour force statistics are seasonally adjusted, unless otherwise indicated

Unemployment rate falls back to 5.8% in August; job growth resumes

British Columbia's unemployment rate dropped back to 5.8% in August, after a brief upturn (to 6.2%) in the previous month. The improvement in the jobless rate was the result of renewed job growth (+0.4%), combined with a stable labour force (unchanged at 2,265,000 in August).

Employment rose to 2,133,000 in August after stalling in the previous month. In contrast to the situation in July, when many service sector employers pared down the size of their workforce, service sector employment increased (+0.6%) last month. Retail and wholesale trade (+3.8%), health care (+3.3%) and public administration (+3.1%) made particularly strong gains. The management & administration services industry also hired more workers (+3.0%). However, tourism-related industries such as accommodation & food services (-2.9%) and transportation & warehousing (-2.1%) cut back on their staff.

In the goods sector, there were 0.6% fewer jobs, as employment fell in most industries. Manufacturing, the biggest employer among the goods industries, reduced its workforce 2.2%, but this was partly mitigated by an increase in the number of construction workers (+2.9%). There were fewer jobs in agriculture (-9.5%) and utilities (-9.4%), but more workers in primary industries such as forestry, fishing and mining (+6.5%).

The number of women with jobs rose 1.1% in August, which was more than enough to ab-

sorb a 0.9% increase in the number of women available for work. However, the job market for men continued to tighten. Male employment slipped for the third straight month, falling 0.3% in August, and the labour force shrank (-0.9%) for the first time since March.

There were fewer jobs for men, but more women were employed in August

Self-employment played a big role in job growth last month, advancing 0.6%. Among employees, job gains were concentrated in the private sector (+0.6%). The number of public sector jobs fell 0.6%, largely because there were fewer people employed in educational services (-1.7%), an industry that is largely comprised of public sector workers.

Full-time employment fell 0.6%, with both men (-0.7%) and women (-0.5%) feeling the

pinch. Both sexes benefited from an increase in the number of part-time jobs available (+4.1%).

The unemployment rate among young adults (aged 15 to 24) dropped again in August, falling to 10.2%.

Regional job market remains robust

Job markets were generally upbeat in most regions of the province. Relative to August 2004, only Kootenay (-0.7%, 3-month-moving average, unadjusted) and Cariboo (-0.9%) saw employment decline. For the fifth straight month, North Coast-Nechako posted a double-digit increase (+19.1%) in employment. Job growth was solid, but more restrained, in the rest of the province, ranging from +1.8% in Mainland/Southwest to +6.5% in Thompson-Okanagan.

Regional unemployment rates reflected the robust job growth. Unemployment rates in some of the regions had remained at double-digit levels during most of the period since the late 1990s. The situation has been improving, however, and since May, all regions of the province have recorded rates of less than ten percent. In August, jobless rates ranged from 4.2% in Northeast to 7.0% in Cariboo. Mainland/Southwest (6.3%) had the second-highest unemployment rate in the province.

In Vancouver, the unemployment rate was 6.4%. Victoria's jobless rate was just 4.1%.

The National Scene

Canada's unemployment rate was unchanged at 6.8% in August, a full percentage point higher than BC's. Nationally, both the labour force and the number of jobs increased at the same rate (+0.2%). The four western provinces had the lowest unemployment rates in the country, ranging from 3.9% in Alberta to BC's 5.8%.

Selected Statistics	Aug 05	Jul 05	Aug 04

NOTES: 1. Occupation specific unemployment rates are based on the 1990 Census of the United States.

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Unoccupation, Unemployed" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Anne Kittredge at (250)387-0374 or Anne.Kittredge@gems6.gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate (employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.

Labour Force Statistics ♦ September 2005

HIGHLIGHTS

All labour force statistics are seasonally adjusted, unless otherwise indicated

Unemployment rate slips again, falling to 5.7% in September; job growth continues

British Columbia's unemployment rate fell for the second straight month in September, slipping 0.1 percentage points to 5.7%. A slight decline in the labour force (-0.1%) combined with a small increase in employment (+0.1%) was the reason for the improvement in the jobless rate.

A 0.4% increase in the size of the workforce in BC's service sector was the driving force behind the jump in overall employment to 2,146,800. Significant increases in employment in retail and wholesale trade (+2.5%) and information, culture & recreation (+11.7%) and a rebound in tourism-related industries such as accommodation & food services (+1.1%) and transportation & warehousing (+3.7%) helped offset large declines in finance, insurance & real estate & leasing (-6.1%) and professional, scientific & technical services (-4.1%).

Employment in the goods sector fell in September with 1.2% fewer jobs being recorded in goods-producing industries. This is despite the fact that manufacturing, the largest employer among the goods industries, increased its workforce 1.5%. Significant drops in employment in construction (-1.2%), primary industries such as forestry, fishing & mining (-5.3%) and agriculture (-9.5%) countered the gains in manufacturing.

After experiencing three months of falling employment, the number of men at work in BC increased 0.8% in September. However, there

were 7,500 fewer women with jobs in the province (-0.7%) compared to August.

The overall employment increase was a result of a 0.2% jump in full-time employment (+4,100 jobs), which more than offset a 0.5% drop in part-time jobs (-2,400). The rise in full-time employment was the result of a 1.1% expansion in men working full-time, as fewer women had full-time jobs in September (-0.9%). Both men (-1.2%) and women (-0.3%) shared in the responsibility for the drop in part-time jobs.

Full-time employment in BC has been trending up for almost four years

The number of self-employed slipped 0.5% in September, wiping out most of the growth experienced from July to August. Among employees, job gains were concentrated in the private sector (+0.8%). Public sector employment slumped 1.7% as industries dominated

by public sector workers, such as public administration (-2.1%) and educational services (-0.3%), shed employees.

The unemployment rate among young adults (aged 15 to 24) fell significantly in September, dropping to 8.7% from 10.2% in August.

Some regions fare better than others

For the fifth consecutive month, all regions of the province saw single-digit unemployment rates. The jobless rates ranged from a low of 4.4% (3-month-moving average, unadjusted) in the Northeast to 6.4% in Kootenay and Vancouver Island/Coast. The Cariboo region has experienced considerable improvement in the rate of unemployment over the last several months, dropping from a peak of 10.4% in April, to 5.4% in September, a phenomenal five percentage point decline. Mainland/Southwest and Thompson-Okanagan also saw improvement with each recording a decline of 0.3 points; however, all other regions of the province experienced rising unemployment including a one percentage point jump in Kootenay and a 0.7 point increase in Vancouver Island/Coast.

With the exception of Thompson-Okanagan (+1.8%), all other regions of the province saw employment fall in September. The Northeast (-3.5%) experienced the most significant drop

in jobs, followed by North Coast and Nechako (-2.3%).

In Vancouver, the unemployment rate was 6.1%. Victoria's jobless rate was just 4.6%.

The national scene

Canada's unemployment rate improved to 6.7% in September, remaining a full percentage point higher than BC's rate. Nationally, both the size of the labour force and the number of jobs remained virtually unchanged. The four western provinces had the lowest unemployment rates in the country, ranging from 4.1% in Alberta to 6.0% in Saskatchewan.

Employment growth decelerates in 3rd quarter

The number of jobs in the province edged up only 0.3% in the third quarter, following robust growth of 0.7% and 1.3% in the first and second quarters respectively. The province's unemployment rate remained virtually unchanged in the third quarter, compared to a 0.8 percentage point drop between the first and second quarters. Women (+0.7% rise in employment) fared better than men (-0.1%) in the third quarter. Part-time jobs (+0.5%) grew slightly faster than full-time jobs (+0.3%), but 71% of the increase in employment between the second and third quarters was comprised of full-time positions.

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Anne Kittredge at (250)387-0374 or Anne.Kittredge@gems6.gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate (employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.

Labour Force Statistics ♦ October 2005

HIGHLIGHTS

All labour force statistics are seasonally adjusted, unless otherwise indicated

Unemployment rate falls to at least a 30-year low; job growth continues

British Columbia's unemployment rate fell 0.6 percentage points to 5.1% in October, its lowest level in at least 30 years. A significant jump in employment (+0.7%) pushed the unemployment rate down despite a slight boost in the labour force (+0.1%).

The service sector continues to drive the expansion in jobs. While the goods sector experienced a 0.4% drop in employment between September and October, service jobs climbed 1.0%. Strong growth in the workforce of wholesale & retail trade (+5.9%) and information, culture & recreation (+3.3%) industries helped offset significant declines in employment in educational services (-7.2%) and public administration (-4.3%).

BC's manufacturing sector shed about 3,200 jobs in October, a drop of 1.6%. A slump in construction employment (-1.2%) also contributed to the decline in jobs in the goods sector. Strong employment growth in the primary industries such as forestry, fishing & mining (+5.9%) and agriculture (+2.8%) were not enough to offset the losses in manufacturing and construction.

Women benefited the most from the increase in employment as the female work-force in BC expanded 1.1% in October, more than recovering from a 0.7% drop a month earlier. The unemployment rate for women in BC dropped to 4.6%, the lowest rate in at least three decades and a full percentage point lower than a month earlier. The number of men employed in BC

also climbed, edging up 0.3%, with male unemployment in the province dropping to 5.6%.

The overall employment increase was a combination of a 0.5% rise in full-time employment (+8,900 jobs) and a 1.2% increase in part-time jobs (+5,400).

The number of self-employed in BC hit an all-time high in October

The number of self-employed in the province grew to an all-time high in October, rising 1.9% to 431,500. Among employees, job gains were concentrated in the private sector (+0.6%) as public sector employment continued to slump (-0.6%) due to losses in industries dominated by public sector workers, such as public administration and educational services.

Some regions fare better than others

Unemployment rates dropped in most regions of the province, with the exception of North

Coast/Nechako, where the jobless rate climbed to 6.0% (3-month-moving average, unadjusted) and Northeast, where it was unchanged. The 4.4% rate recorded in Northeast was the lowest in the province, while North/Coast Nechako's 6.0% was the highest. October was the sixth consecutive month where all regions of the province had single-digit unemployment rates. In Vancouver, the unemployment rate was 5.4%, while Victoria's jobless rate was just 4.7%.

Employment fell marginally in Mainland/Southwest in October (-0.1%) and North Coast/Nechako (-3.2%) and Northeast (-1.5%) also experienced declines in employment, but all other regions of the province saw an increase in jobs. Kootenay had the strongest job growth (+1.4%), followed by Cariboo (+1.1%). Thompson-Okanagan (+0.9%) and Vancouver Island/Coast (+0.4%) also showed improvement.

The national scene

Canada's unemployment rate improved to 6.6% (seasonally adjusted) in October, but was still a full one-and-a-half percentage points higher than BC's rate. A 0.4% increase in employment outpaced 0.3% growth in the labour force to drive down the unemployment rate. The four western provinces had the lowest unemployment rates in the country, ranging from 4.0% in Alberta to 5.2% in Saskatchewan, while Newfoundland and Labrador's 15.2% was the highest rate of joblessness in Canada.

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Anne Kittredge at (250)387-0374 or Anne.Kittredge@gems6.gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate (employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.

Labour Force Statistics ♦ November 2005

HIGHLIGHTS

All labour force statistics are seasonally adjusted, unless otherwise indicated

Jobless rate at lowest level in at least 30 years

British Columbia's unemployment rate continued to tumble in November, dropping to 4.9%, the lowest level since 1976 (the first year for which labour force estimates are available). The continued improvement in the province's job market occurred despite a significant increase (+0.6%) in the size of the labour force, as employment growth (+0.8%) was more than strong enough to absorb the net addition of 14,300 people who were either working or looking for work.

Except for a brief period during the early 1990s, BC has had the highest unemployment rate in western Canada for most of the last thirty years, but the recent improvement has brought the province in line with the rest of the west. Although it is still higher than in both Alberta (4.1%) and Manitoba (4.2%), BC's unemployment rate has fallen below Saskatchewan's (5.2%) and is significantly lower than the national average of 6.4%.

More full-time jobs

Full-time employment increased 1.5% in November, but there were fewer people with part-time (-1.7%) jobs. Self-employment, a strong source of job growth in October, fell back 2.1% in November. There were 2.0% more private sector jobs, but employment in the public sector was down for the sixth month in a row.

The unemployment rate for those aged 25 and over edged up to 4.6%, but young people (aged 15-24) were less likely to be unemployed. The jobless rate in this age group dropped 1.6 percentage points, to 6.9%.

Goods sector drives job growth

Last month, the job gains in BC were concentrated in the goods sector, which took on 12,400 (+2.8%) more workers. Manufacturing (+6.7%) and construction (+4.1%), the biggest employers in the sector, accounted for most of the job growth in the goods industries. The electric power and gas utilities (-17.9%), forestry, fishing & mining (-7.1%) and agriculture (-7.1%) industries all cut back on the size of their workforce.

In the service sector, employment advanced just 0.3%, as many service industries kept the lid on job growth. The exceptions were information, culture & recreation (+6.5%), professional, scientific & technical (+4.6%), finance, insurance & real estate (+1.8%) and education (+1.3%) services. There were fewer jobs in retail & wholesale trade (-2.1%), management & administration (-1.6%), public

administration (-1.5%), and most other service industries.

The number of men (+0.9%) and women (+0.7%) with jobs increased, but the sexes did not fare equally well in terms of unemployment rates. Among men, the jobless rate fell 0.9 percentage points, to 4.7%. For women, however, job growth was not strong enough to absorb the increase in the size of the labour force, and the jobless rate climbed from 4.6% to 5.2%. This disparity likely reflects the nature of goods and service sector employment. Most of the net job growth in November was in goods industries such as manufacturing and construction, which tend to have a higher percentage of male employees, while the service sector, which shed jobs in November, is more likely to employ women.

Vancouver benefits most from job growth

In Vancouver, the unemployment rate inched up (to 4.7%), while Victoria's jobless rate edged down (to 4.3%). Abbotsford's unemployment rate was 5.6

Despite the increase in Vancouver's unemployment rate, the largest city in the province

saw the strongest employment growth (+2.4%, or 27,900 net new jobs). However, the labour force expanded even more (by 29,400 people) in November. In Victoria, the number of people with jobs fell 2.7% in November.

Unemployment rates lowest in Thompson-Okanagan and Mainland/Southwest

Among the regions, jobless rates were lowest in Thompson-Okanagan (4.3%, 3-month-moving average) and Mainland/Southwest (4.4%) and highest in North Coast/Nechako (6.8%). Kootenay (-2.8%) and Northeast (-4.8%) were the only regions to see a net decline in employment, relative to the same period of 2004.

The National Scene

Canada's unemployment rate dropped to 6.4% in November, partly because there were more jobs (+0.2%) but also because the labour force shrank (-0.1%). Eight of the provinces saw unemployment rates decline. Despite the improvement, jobless rates remained well into the double-digits in Newfoundland (15.6%).

Selected Statistics	Nov-05	Oct-05	Nov-04
BC Unemployment Rate (%)	4.9	5.1	6.5
Canadian Unemployment Rate (%)	6.4	6.6	7.2
BC Employment ('000)	2,167	2,149	2,077
BC Labour Force Participation Rate (%)	65.6	65.3	65.1
November % change in employment relative to:	-	0.8	4.3
November % change in labour force relative to:	-	0.6	2.6

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Anne Kittredge at (250)387-0374 or Anne.Kittredge@gems6.gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate (employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.

Labour Force Statistics ♦ Revised December 2005

On Wednesday, January 25, 2006, there was a revision affecting all Labour Force Survey estimates from January 1987 to December 2005.

There are three reasons for this revision:

- 1) The revision enables the use of improved population benchmarks in the LFS estimation process. These improved benchmarks provide better information on the number of non-permanent residents.
- 2) There were changes to the data for the public and private sectors from 1987 to 1999. Previously, the data on the public and private sectors for this period were based on an old definition of the public sector. The revised data will better reflect the current public sector definition, and therefore result in a longer time series for analysis.
- 3) The geographic coding of several small Census Agglomerations (CA) have been updated historically from 1996 urban centre boundaries to 2001 CA boundaries. This affects data from January 1987 to December 2004.

For more detailed information on the revisions please see Statistics Canada's January 25, 2006 Daily at <http://www.statcan.ca/english/dai-quo/> and go to 'New products' and download "Improvements to the Labour Force Survey: no. 3, Catalogue number 71F0031XIE2006003 (free)".

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons who includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Anne Kittredge at (250)387-0374 or Anne.Kittredge@gems6.gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate (employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.
